MAKE AN

entrance

Colour is one of the most important factors when choosing your new front door. To complement your home our low-maintenance colour finish is designed to stay looking good year after year, both on the inside and outside. Our range of colours, styles and glass options will make your door truly unique.

STANDARD

Black

White

Bespoke

For full colour availability per door style, see the Full Door Range & Colour Guide page.

Any RAL/BS colour has an extended lead time and extra charges will apply.

Important note: due to the nature of the process together with the different materials/substrates relative to the door skins, glazing cassettes, door frame and Renolit foil film then colour shade and gloss level variation will inevitably occur from one another. If you are matching the door to a Renolit foil film frame, variation may occur and we cannot be held responsible if the colours do not match. If you are unsure about a colour match, please request a physical swatch sample from your supplier.

Why US?

UNPARALLELED SECURITY

Our GRP composite doors offer enhanced security thanks to its rigid polymer sub-frame, high density insulated foam core and high impact resistant GRP skin.

STUNNING AESTHETICS

The woodgrain finish on our doors is developed from oak tree grain. You'll also find the same woodgrain effect and moulding design on the slim glazing cassette, giving a seamless and authentic finish.

LOW MAINTENANCE

Everything about our GRP composite door is designed to be easy to maintain - simply wipe clean with warm soapy water.

THERMAL EFFICIENCY

The rising cost of energy bills and the impact on the environment means we all want to keep our consumption to a minimum. When compared to a solid timber core composite door (48mm) and a timber panelled door (44mm), calculations prove that our composite door is 50% more thermally efficient than the alternatives.

SUPERB SOUND INSULATION

With a weighted noise reduction of 31 decibels it means you can be sure your new door will keep outside noise to a minimum.

EXCEPTIONAL DURABILITY

High impact resistant glass reinforced polyester (GRP) skin that will maintain its pristine appearance.

DECORATIVE GLAZED GLASS

Our glazed, laminated as standard insulated 24mm glass units encapsulate the decorative glazing between two panes of clear glass, protecting it and making it easy to keep clean.

EXCELLENT WEATHERPROOFING

With water resistant polymer composite rails, our doors will keep the weather at bay and will stay looking great for longer.

Secured by Design

Official Police Security Initiative

Tried, tested and trusted...

HIGH SECURITY COMPOSITE DOORS

We believe that everyone should feel safe and secure in their home, that is why our products are Secured by Design (SBD) accredited.

Secured by Design is a widely respected and long-established official police security initiative operated by the UK Police Service.

It provides a recognised standard for all security products which can deter and reduce crime, and help people live more safely.

Our SBD accredited products** have been rigorously tested by a United Kingdom Accreditation Service (UKAS) accredited independent, third-party certification body and meet the security requirements of the SBD Police Preferred Specification.

For more information, please visit <https://www.framexpress.co.uk/secured-by-design/>.

Introducing

nxt-gen...

Whilst we feel the choice and quality of our doors are unparalleled; we are constantly striving to raise the bar, to improve our products and to give our customers more.

This can be seen very clearly in this addition to our range. It's called nxt-gen and for a very good reason.

The range features our latest innovation where the flush-fitted innerframe sits level with the moulding to give sleek lines and a finish which is unsurpassed.

Symmetry and balance are also very much key elements as we want you to look at your door and feel it is perfect in every way.

Care and Maintenance

Your Framexpress GRP composite door has been designed to be easy to maintain.

To keep your door clean, prolong the life of the surface finish and protect your warranty, we recommend you wash it regularly using warm soapy water (washing up liquid is ideal) and a soft, lint-free cloth. If you live in a coastal area, in a heavily industrialised area or near a main road, you may need to clean your door more frequently.

It is important that you DO NOT use any of the following on your door:

- Abrasive cleaners or scouring pads
- Any type of bleach or solvent (e.g. white spirit, methylated spirit, cellulose thinners, acetone or nail varnish remover)
- Any type of adhesives or tack for providing temporary protection or fixing of seasonal or other decorations etc.
- High pressure or steam cleaners

Door Construction

Every Framexpress GRP composite door is manufactured to the highest of standards to ensure it is strong, durable and secure. We have sold over four million doors to date, evidence of the quality and exacting specification we demand.

The door has a perimeter sub-frame of a solid, water-resistant polymer material, which is reinforced with Laminated Veneered Lumber (LVL). A thermoset GRP skin is bonded to this sub-frame and the core of the door is then filled with high density, 100% CFC-free polyurethane foam. Water resistant polymer composite rails protect the core from damage or water absorption and the high impact resistant thermoset GRP skin keeps your door looking great for longer!

The door's core is what makes it so thermally efficient and so good at reducing sound. In fact, it is the most thermally efficient door on the market, increasing your home's energy efficiency and saving you money on your energy bills.

Technical Figures

A Framexpress GRP composite door has a wealth of facts and figures that prove its quality. The door:

- Reduces outdoor noise by an average of 31dB
- Achieves Global Warming Potential (GWP) score of less than 5
- Achieves Ozone Depletion Potential (ODP) score of zero

Energy Efficiency

Doors were tested at the University of Salford's Energy House. This represents a typical Salford 1919 terraced house and its construction represents 21% of the UK's current housing stock.

The house has been reconstructed in a fully environmentally controllable chamber, in which climatic conditions can be maintained, varied, repeated and patterns monitored. For the test, the inside temperature of the Energy House was 25°C with an exterior temperature of 5°C.

Decorative Glass

Construction example;

Features and benefits:

- Decorative triple glazing
- 24mm glass units for standard doors
- Protected from dust and weathering, easy to clean and stays looking good for longer
- Tested and CE marked
- 6.8mm glass laminated as standard
- Glass patterns may vary
- Slight bubbles, lines and surface imperfections are all characteristics of glass. They are not to be considered as defects as they add character to decorative glass.
